

Grill And Go - Design Document

Name of Project 2 - Grill And Go

Authors- Sourav Das

Puneet Singh Puri

Project Description

Grill & Go is a two-sided web application for a campus deli, built with Node.js, Express, and server-rendered HTML to keep the experience fast, simple, and accessible. On the customer side, visitors browse a clear menu, customize sandwiches (bread, protein, cheese, toppings, sauces) with live price updates, and place quick pickup orders. Payments are processed securely via Stripe (MVP in test mode), and Stripe webhooks update order state on success; no card data is stored on our servers. After checkout, customers land on an order-status page that tracks progress from Placed → In Prep → Ready and shows a reliable pickup ETA. On the operations side, an admin portal keeps the menu accurate, shows the order list, and lets managers create weekly staffing rosters; employees can view and confirm upcoming shifts from a mobile-friendly dashboard or SMS links. Data—employee records, order details, and customer profiles—is stored and fetched from MongoDB Atlas collections (accessed via the Node driver/Mongoose), ensuring scalable persistence and easy querying. Security and reliability are addressed with cookie sessions, role-based access, hashed passwords, CSRF protection, and idempotent webhooks.

MVP Scope

- Server-rendered HTML pages: Menu, Customize, Cart, Checkout, Order Status; Admin Login, Dashboard, Rosters.
- Roster creation, publishing the roster, managing employees.
- Cash or test-card checkout; order status via simple polling.

User personas

Tina — Store Manager (Admin)

- **Profile:** Full-time manager coordinating 10–15 part-time staff; responsible for coverage, menu accuracy, and daily ops.
- **Goals:** Create/adjust weekly rosters fast; notify everyone instantly; track confirmations and fill gaps.
- **Frustrations:** Paper schedules, manual texting, unclear confirmations.
- **Success metrics:** Build a weekly roster in ≤ 2 minutes.
- **Primary tasks:** Create roster → assign roles → publish

Sourav — Employee (Staff)

- **Profile:** Part-time student employee; varying availability week-to-week.
- **Goals:** Checks the real time shift timings from Employee dashboard.

Puneet — Customer

- **Profile:** Busy grad student; orders during short breaks.
- **Goals:** Quickly customize a sandwich and check out; predictable pickup time.
- **Frustrations:** Long lines; too many steps to customize; unclear ETA.
- **Success metrics:** Place an order in < 2 minutes, repeat order in < 30 seconds.
- **Primary tasks:** Browse menu → customize → add to cart → choose pickup time → pay.

Vedant — Customer (Beverage orderer)

- **Profile:** Frequent buyer with a favorite build.
- **Goals:** View past orders and reorder effortlessly; minor tweaks without rebuilding.
- **Frustrations:** Re-entering choices every time.
- **Success metrics:** One-click reorder; optional edit before checkout.
- **Primary tasks:** Open Order History → Reorder → (optional) tweak → checkout.

User stories

Tina (Store Manager)

1. *As Tina, I want to create a weekly roster with role counts (e.g., 2 assemblers, 1 cashier) so I can ensure coverage for each day.*
2. *As Tina, I want to publish the roster so the all the employees can check their shifts from their employee dashboards.*

Sourav (Employee)

4. *As Sourav, I want to check the roster to know my shift timings.*
5. *As Sourav, I want to login in my employee dashboard to check my shifts and any important announcements by the admin.*

Puneet (Customer)

6. *As Puneet, I want to customize bread, protein, cheese, toppings, and sauces with live price updates so I know the final cost.*
7. *As Puneet, I want to select a pickup time window and see an ETA so I can plan around class.*
Acceptance hints: Price recalculates with each choice; after payment, the status page shows *Placed*

Vedant (Customer)

8. *As Vedant, I want to order beverages with live price updates so that I know the final cost*
9. *As Vedant, I want to login in my account to proceed to payment page to place order.*

Design Mockups-

a) Home page

Home page – layout

This layout uses a clear F-pattern: a **sticky header** with primary nav (Home, Sandwiches, Beverages) and right-aligned Cart + Sign In actions for instant access. The main body prioritizes a Menu cards grid (image/name/price/Customize) so users can start an order without scrolling past marketing. A secondary Promotions band highlights deals or limited-time items to drive conversion. The **footer** consolidates Quick links, Contact details, and Opening hours; if closed, an “Order ahead” notice appears. Browsing is open to all, but checkout prompts Sign In/Create account.

b) Sandwiches page

Sandwiches page – layout

This layout mirrors the home F-pattern with a sticky header (Home, Sandwiches, Beverages) and right-aligned Cart + Sign In for constant access. The content focuses on a grid of signature sandwich cards—each card shows image, name, short blurb, price, and a clear Add to Cart (with optional “Customize”). A secondary **Promotions** band sits below the grid to surface deals without distracting from selection. The **footer** repeats Quick links, Contact, and Opening hours; out-of-stock items render disabled CTAs.

c) Beverages

Here there will be list of Beverages with add to cart button for the customers.

Beverages page – layout

This screen mirrors the home F-pattern with a sticky header (Home, Sandwiches, Beverages) and right-aligned Cart + Sign In for constant access. The content is split into two stacked sections—Hot Beverages and Cold Beverages—each shown as a grid of product cards with image, name, price, and a clear Add to Cart (optionally “Customize” for size/sugar/ice). The primary action is to add a drink directly; clicking the card opens customization, and the cart badge updates in place while checkout requires sign-in. The footer repeats Quick links, Contact, and Opening hours; out-of-stock items disable their CTA.

d) Order summary page

Home Sandwiches Beverages		Cart	Logout
Order details	Order summary		
		Proceed to payment	
Quicklinks Contact Details Opening hours			

Order summary page – layout

This page uses a two-column review layout under a **sticky header** (Home/Sandwiches/Beverages) with right-aligned **Cart** and **Logout**. The left panel, **Order details**, lists line items with quantity steppers, edit/remove links, and an optional “order notes” field; changes recalculation totals instantly. The right panel, **Order summary**, shows subtotal/tax/total, pickup window/ETA, and an optional promo field, with a prominent **Proceed to payment** CTA. The CTA redirects to checkout (or to **Sign In** and then back) and is disabled until required info is present.

e) Customer payment checkout page

Customer payment checkout page – layout

A focused, single-column checkout under the **sticky header** with **Cart** and **Logout**. The centered **Order summary** card shows items, pickup window/ETA, and totals, beneath it sits the primary CTA: **Pay and place order**.

f) Login page

Home Sandwiches Beverages		Cart	SignIn
Login	Create Account		
Quicklinks Contact Details Opening hours			

This is the login page layout where Admin, Employee and customer all can login.

Login page – layout write-up

This screen keeps the **sticky header** (Home, Sandwiches, Beverages) with **Cart** and shows a two-column card in the center: **Login** (left) and **Create Account** (right). The Login panel has email + password. On success the user is redirected by role (**Admin** → **Dashboard**, **Employee** → **Staff Dashboard**, **Customer** → **previous page/Cart**). The Create Account panel collects name, email, phone, and password, then signs the customer in automatically. The **footer** repeats Quick links/Contact/Opening hours; forms are keyboard-accessible with inline validation and generic error messaging (no user enumeration).

g) Admin Dashboard page

When admin logs in, the individual will be taken to this page.

Admin Dashboard page – layout

This is the admin landing hub after sign-in. A simple **header** carries the “Admin Dashboard” title with a right-aligned **Logout**. Cards include **Order List**, **Roster Summary**, **Announcements**, **Manage Employees**, **Create Roster** (CTA), and **Quick Stats** (today’s KPIs). Clicking a card drills into its module. Role-based access limits what appears, cards are keyboard-navigable, and the familiar **footer** (Quick links/Contact/Opening hours) maintains visual consistency across the site.

h) Roster creation page

The wireframe illustrates the layout of the Roster creation page, organized into three horizontal sections separated by thin black lines. The top section contains the text "Weekly roster creation" centered and a "Logout" button in the top right corner. The middle section is a large form area containing three centered, stacked boxes: "Date range selection", "Employee selection and their limited working hours", and "Create roster button". The bottom section is a footer area containing the text "Quicklinks Contact Details Opening hours" centered.

Roster creation page – layout write-up

A clean, form-centric layout with a **header** (“Weekly roster creation”) and right-aligned **Logout**, followed by a centered form. The first block is a **Date range / Week start** selector (choosing the Monday auto-fills the week); the second block is **Employee selection** with each employee’s **max hours / availability** inputs. The primary CTA, **Create roster**, saves a **Draft** roster and routes to the Roster Detail grid for day-by-day assignments. Validation guards against empty staff lists or invalid hour limits; time zone is fixed to store hours, and the familiar footer (Quick links/Contact/Opening hours) keeps visual consistency.

i) Roster summary page

Roster summary page – layout write-up

This screen shows a clean summary of the **current week's roster**: a central **Roster table** listing Day, Role, Staff, Start–End, and **Status** (Pending/Confirmed/Declined) with an **Actions** cell to edit or remove. A simple header (“Weekly roster creation”) with **Logout** keeps context visible, while a week picker/filter (above the table) lets admins jump between weeks or search by staff. The **primary interactions** are to review coverage at a glance, open a row to adjust an assignment, and trigger **Publish/Republish**. Notes: published versions are read-only (new edits create a new version), status chips use color for quick scanning, and the table supports CSV export/print for backup.

j) Order list page

When admin selects the order list button then the individual will be taken to order lists created by the customers.

Order list page – layout

This admin view centers on a large **Orders list** table under a simple header with **Logout**. Above the table sit **filters/search** (date range and status tabs: Placed, In-Prep, Ready, Completed) with badge counts. Each row shows **Order #, Customer/phone, Items/qty, Total, Time, Status** plus actions (**View, Print ticket, Mark In-Prep/Ready/Complete**). The table auto-refreshes periodically, uses color-coded status chips, supports keyboard navigation.

k) Manage employees page

Manage employees page – layout

A simple admin-only screen with a header (“Manage employees”) and right-aligned **Logout**. The primary CTA, **Add Employee**, sits above a tabular **Employee list** showing Name, Role, Phone, Email, and **Status** (Active/Inactive), with per-row **Edit** and **Delete** actions. A search/filter bar (role/status) and pagination help scan larger teams; **Edit** opens a form to update contact details, role. **Delete** uses a confirm dialog and ideally performs a **soft delete** / **deactivate** to preserve past rosters; on mobile the actions collapse into a single “More” menu with keyboard-accessible controls.

1) Employee login

Staff Dashboard (employee) – layout

A minimal post-login hub with a simple **header** (“Staff Dashboard”) and a right-aligned **Logout**. The body features two stacked cards: **Roster summary** shows the next shift at the top (date, start–end, role). **Announcements** lists manager notes (e.g., policy changes, menu outages). The layout keeps focus on what staff need now—confirm today’s shift and read updates—while the familiar footer (Quick links/Contact/Opening hours) maintains consistency.
